Art Unit: 1643

DETAILED ACTION

1. The amendment filed December 8, 2003 is acknowledged and has been entered.

2. Claims 1-62 are pending in the application and are currently subject to restriction.

Election/Restrictions

- 3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Group I. Claims 1-62, insofar as the claims are drawn to an isolated polypeptide comprising an amino acid sequence that is at least 95% identical to SEQ ID NO:2 or fragment thereof, a fusion polypeptide comprising SEQ ID NO: 2 or a fragment thereof and a heterologous amino acid sequence, and a composition of said polypeptide or fusion polypeptide, classified, for example, in class 530, subclass 300.
 - Group II. Claims 1-62, insofar as the claims are drawn to an isolated polypeptide comprising an amino acid sequence that is at least 95% identical to SEQ ID NO:4 or fragment thereof, a fusion polypeptide comprising SEQ ID NO: 4 or a fragment thereof and a heterologous amino acid sequence, and a composition of said polypeptide or fusion polypeptide, classified, for example, in class 530, subclass 300.
- 4. The inventions of Groups I and II are patentably distinct for the following reasons:

 The inventions of Group I are isolated polypeptides comprising SEQ ID NO:2 or
 fragment thereof, whereas the inventions of Groups II are isolated polypeptides
 comprising SEQ ID NO:4 or fragment thereof.

Art Unit: 1643

The inventions of Group I and the inventions of Group II are patentably distinct because, although both are polypeptides, the inventions of Group I are isolated polypeptides comprising SEQ ID NO: 2 or a fragment thereof, whereas the inventions of Group II are isolated polypeptides comprising SEQ ID NO: 4 or a fragment thereof. Polypeptides are composed of polymers of amino acids. Each of the different polypeptides is structurally and/or functionally distinct because each comprises a uniquely different amino acid sequence. Moreover, each different protein is expected to have a different function or role, or to be expressed by different cells, or subsets of cells.

Because the inventions of Groups I and II are distinct for these reasons, the search required to examine claims directed to any one of these inventions is not the same, nor is it coextensive with the search required to examine claims directed to any other. Because different searches would have to be performed to examine claims directed to the inventions of Groups I and II, an examination of both would constitute a serious burden.

Since the inventions of Groups I and II have been shown to be patentably distinct, and because the examination of both inventions could not be made without serious burden, it is proper to restrict each from the other. See MPEP § 803.

- 5. Because these inventions are distinct for the reasons given above and also because the search required for any one group is not required for any other group and/or the inventions have acquired a separate status in the art as shown by their different classification or their recognized divergent subject matter, searching more than one invention encompassed by the claim would constitute a serious burden; therefore, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 1643

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103(a) of the other invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chanda L. Macias, Ph.D. whose telephone number is (571) 272-9032. The examiner can normally be reached on Monday-Friday, 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Helms, Ph.D. can be reached on (571) 272-0832. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
